

COMPLETE PROCESSING LINES FOR ONGOING SUCCESS

TRANSFORM YOUR HARVEST INTO A GOLDEN OPPORTUNITY

Expert in twin screw extrusion technology and couscous and pasta production, Clextral can help transform your cereal grains from basic commodities into value-added products to improve your profitability and expand your markets.

Clextral turnkey processing lines can put you on the fast track to success with product development, customized engineering, equipment from raw material handling to final packaging, installation and training.

With a small capital investment you can turn your harvest into value added products :

- BREAKFAST CEREALS
- SNACK FOODS
- CO-EXTRUDED PRODUCTS
- CRISPY BREAD
- FIBRATED PROTEINS
- FUNCTIONAL INGREDIENTS
- MODIFIED STARCH
- COUSCOUS
- PASTA
- PET FOOD & TREATS
- FISH FEED

SERVING WORLDWIDE MARKETS

At Clextral, innovation is the driving force of growth, and our three R & D centers are dedicated to developing new products and improving processes. Design, laboratory testing, prototyping, small batch processing and industrial simulation are performed independently and confidentially in these centers.

Clextral develops technologies and designs processing plants on a turnkey basis for the food and feed industry as well as specific high technology niche markets.

Clextral has locations on five continents and our systems operate in 92 countries worldwide. We also work closely with a network of industry partners, universities and research laboratories.

Clextral provides all the elements for product success :

- Return on investment studies
- Engineering surveys and services
- Product creation and recipe development
- All processing and packaging equipment
- Line installation
- Staff training
- Comprehensive service and support

Clextral offers semi-industrial tests to improve recipes or to develop new products for its customers.
