

A PROGRAM DESIGNED TO MAINTAIN THE PRODUCTIVITY AND LIFE OF YOUR EXTRUDER

Your Clextral Twin Screw Extruder was designed and manufactured to our exacting standards to provide top levels of performance with consistent and repeatable production for many years.

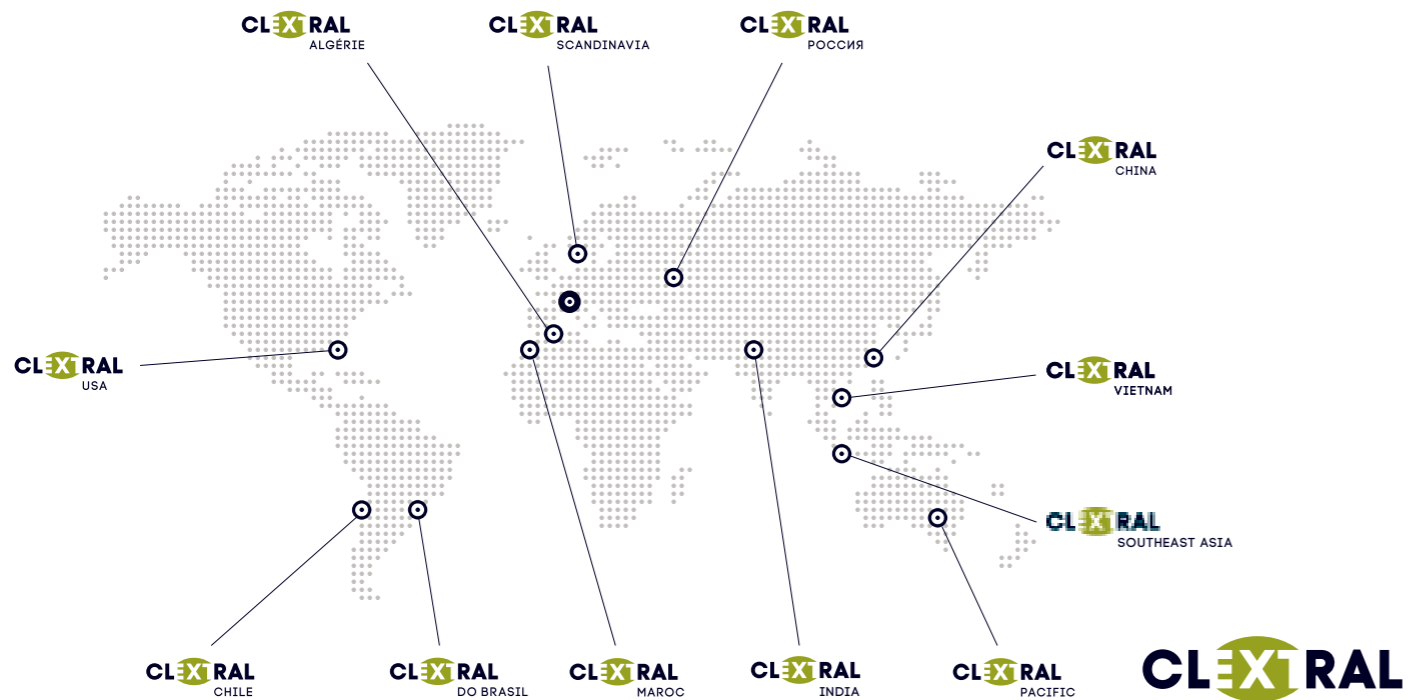

As with any machine, proper maintenance is essential to keep your equipment operating at its full potential while minimizing your cost of operation.

TO OPTIMIZE YOUR EXTRUDER
PERFORMANCE

EXTRUSION SERVICE PROGRAM

ESP PROGRAM BENEFITS

These additional benefits apply throughout the term of your ESP agreement contract:

- Discount on future service rates
- Discount on test plant fee for training and process development

The Clextral **Extrusion Service Program (ESP)** is a complete, cost-effective solution to ensure that your extruder is properly serviced, and your internal processes are carried out appropriately. It is designed to help you preserve the optimal operation, safety and value of your extrusion equipment.

THE ESP AUDIT

Your ESP audit will be conducted by an experienced **Clextral service representative** utilizing advanced diagnostic tools. Typically, the process takes from **8-16 depending upon the machine setup**.

Upon completion, you will receive a **written report** that documents the condition of your equipment based on a **thorough checklist** that includes every area of the machine:

- General condition
- Motors
- Gearbox
- Barrel
- Auxiliaries (preconditioner, feeder, pumps, accessory equipment)
- Screws
- Electrics
- Hydraulics
- Software operation

The report will include **wear analysis, defect assessment**, and a **description of any areas to be addressed**. With this complete picture of your equipment's condition, you can plan and budget for any recommended maintenance procedures, limit unplanned downtime and minimize your production costs.

During the ESP audit process, Clextral's service representative will interact with your maintenance team to refresh/reinforce proper operating and maintenance procedures.

ESP ADVANTAGES

will help you to :

- Optimize your extruder operation
- Ensure proper maintenance procedures are followed
- Control your maintenance costs
- Schedule maintenance events
- Ensure parts availability
- Plan hardware/software upgrades
- Maintain the integrity and value of your extruder
